WO 2004/040442 A2

(57) Abstract: A method of coordinating a software application for execution on a target device, the application comprising a set of pre-compiled, re-useable components and corresponding configuration data. The configuration data (108) is made available to a target device on which the application is to be run. For each component comprising the application, relevant configuration data is determined (110) and an instance of the component is instantiated (112) and configured (116) in dependence on the configuration data. The execution (120) of the application is at least partly determined by the interaction of the configured instances of the components.
